PROFESSIONAL SUMMARY

Software engineering graduate with hands-on experience in Python-based data pipelines, ETL workflows, and SQL-driven backend systems, backed by 3 ML/data internships and a 9+ CGPA in Artificial Intelligence and Machine Learning. Built ETL pipelines for data extraction and transformation, designed relational schemas with MySQL and JPA/Hibernate, and worked with REST APIs across full-stack and backend projects. Seeking a Junior Data Engineer role where I can apply my Python, SQL, and data pipeline experience to business intelligence and data warehousing systems.

TECHNICAL SKILLS

Data & ETL	Python, ETL pipeline design, data preprocessing, feature engineering, MLflow (experiment tracking), MongoDB Atlas
Databases & SQL	MySQL, SQL, Hibernate, JPA (ORM/data modeling), MongoDB, relational schema design
Languages	Java, Python, JavaScript, SQL, Core Java, OOPs, Collections Framework, Exception Handling
Backend & APIs	REST APIs, Spring Boot, Spring MVC, Hibernate, Node.js, Express.js
DevOps & Tooling	Docker, Kubernetes, Jenkins, Git, GitHub, Maven, Postman, SonarQube
Core Concepts	Data Structures, Algorithms, DBMS, Operating Systems, SDLC, Agile

WORK EXPERIENCE

Machine Learning Intern — PRAGYAN AI October 2023 – November 2023

Remote Internship

- Built and deployed a supervised regression model for car price prediction using Python, performing data preprocessing and feature engineering on real-world datasets.
- Performed exploratory data analysis (EDA) and model evaluation to optimize prediction accuracy, applying statistical analysis to business-relevant data.

Machine Learning with Python Intern — COMSOFT TECHNOLOGY October 2022 – November 2022

Remote Internship

- Developed and tested a voice classification machine learning model using Python, including data preprocessing and performance benchmarking.
- Applied data quality and model evaluation metrics to improve classification reliability — foundational experience in data validation workflows.

DevOps Intern — IBM September 2024 –December 2024

VTU-PMKVY AICTE Internship Program | Bangalore, India

- Automated an end-to-end CI/CD pipeline using Jenkins, reducing deployment time by ~40% and enabling consistent delivery across 3 cloud environments — directly transferable to ETL/ELT pipeline orchestration and automation.
- Integrated SonarQube and Trivy for automated code quality analysis and vulnerability scanning, reinforcing data/process validation discipline.
- Containerized applications using Docker and orchestrated scalable deployments with Kubernetes for consistent multi-environment delivery.
- Collaborated using Git and Maven following cloud-native DevOps practices to improve deployment consistency and team development efficiency.

TECHNICAL PROJECTS

Network Security Anomaly Detection (MLOps / Data Pipeline)

github.com/daneshpm

Tech Stack: Python, MLflow, MongoDB Atlas, Docker, Dagshub, CI/CD

- Designed and built ETL pipelines to extract, clean, and transform network traffic data from MongoDB Atlas, structuring raw data for downstream model training.
- Performed data validation, feature engineering, and quality checks as part of the pipeline to ensure reliable inputs for analysis.
- Tracked and versioned data/experiment lineage using MLflow and Dagshub, improving pipeline reproducibility and achieving an approximate 15–20% gain in model accuracy.
- Containerized the full data pipeline with Docker and automated its deployment via CI/CD for a production-ready, repeatable workflow — directly analogous to ETL/ELT orchestration.

Shopping Inventory Management System

github.com/daneshpm

Tech Stack: Java, Spring Boot, Hibernate, JPA, MySQL, Maven

- Designed and implemented a relational data model in MySQL for inventory, category, and stock entities, applying normalized schema design principles.
- Engineered 10+ RESTful APIs for inventory, category, and stock management with full CRUD functionality using Spring Boot and layered architecture.
- Used Hibernate and JPA as an ORM layer over MySQL, optimizing queries for data persistence and retrieval performance.
- Implemented role-based access control and global exception handling for clean, consistent error responses; tested all endpoints using Postman.

Namma Ooru Goli Soda — Full Stack Web Application

github.com/daneshpm

Tech Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS

- Developed a responsive full stack beverage storefront, serving dynamic product listings via 8+ RESTful APIs built with Express.js and MongoDB.
- Designed MongoDB document schemas for product and order data, and integrated frontend and backend using Axios with proper CORS configuration.
- Built interactive UI with animated navigation and responsive product cards using React.js and Tailwind CSS.
- Achieved fully responsive layout across all screen sizes using mobile-first design principles.

EDUCATION

Bachelor of Engineering – Artificial Intelligence and Machine Learning

2021 – 2025

Vijaya Vittala Institute of Technology, VTU | CGPA: 9+

Pre-University – PCMB

2019 – 2021

New Horizon PU College | 82%

Class X

2018 – 2019

St Anne's High School | 83%

CERTIFICATIONS & LEARNING

- Java Full Stack Development – Full Stack Gyan
- Active on LeetCode – 150+ DSA problems solved in Java (Arrays, Trees, DP) | leetcode.com/daneshpm
- Active on HackerRank – Java and problem solving practice | hackerrank.com/daneshpm
